(Preliminary Bulletin)

SOUTH AUSTRALIA

1966-67

SCOPE This bulletin summarises information relating to factory operations in South Australia for the years ended 30 June 1963 to 1967. The figures for 1966-67 are subject to minor revisions and full details will be published in a further bulletin as soon as they become available. Table 2 shows details for selected classes of factories in 1966-67.

DEFINITIONS Value of output is the value of goods manufactured and includes bounty and subsidy payments and amounts received for repair work and work done on commission; it excludes excise duties and all delivery costs and charges.

Value of production is the value added to materials used by the process of manufacture and is calculated by deducting from the value of output the values of materials used, power and fuel consumed, tools replaced, containers, and repairs to plant and buildings.

In tables where figures have been rounded, discrepancies between totals and sums of components are due to rounding.

COMMENT The value of production rose from \$527 million in 1965-66 to \$563 million in 1966-67 - an increase of 6.8 per cent compared with increases of 12.7 per cent, 16.6 per cent and 5.8 per cent in the years 1963-64, 1964-65 and 1965-66 respectively.

SUMMARY OF OPERATIONS A summary of the principal statistics of factories in South Australia during the last five years is shown in the following table.
